Executor

► How to Achieve? **3** Modules are Required

SEEINGFLOW

► We Focus on the “Brain” of Machines

SEEING FLOW

Cerebellum

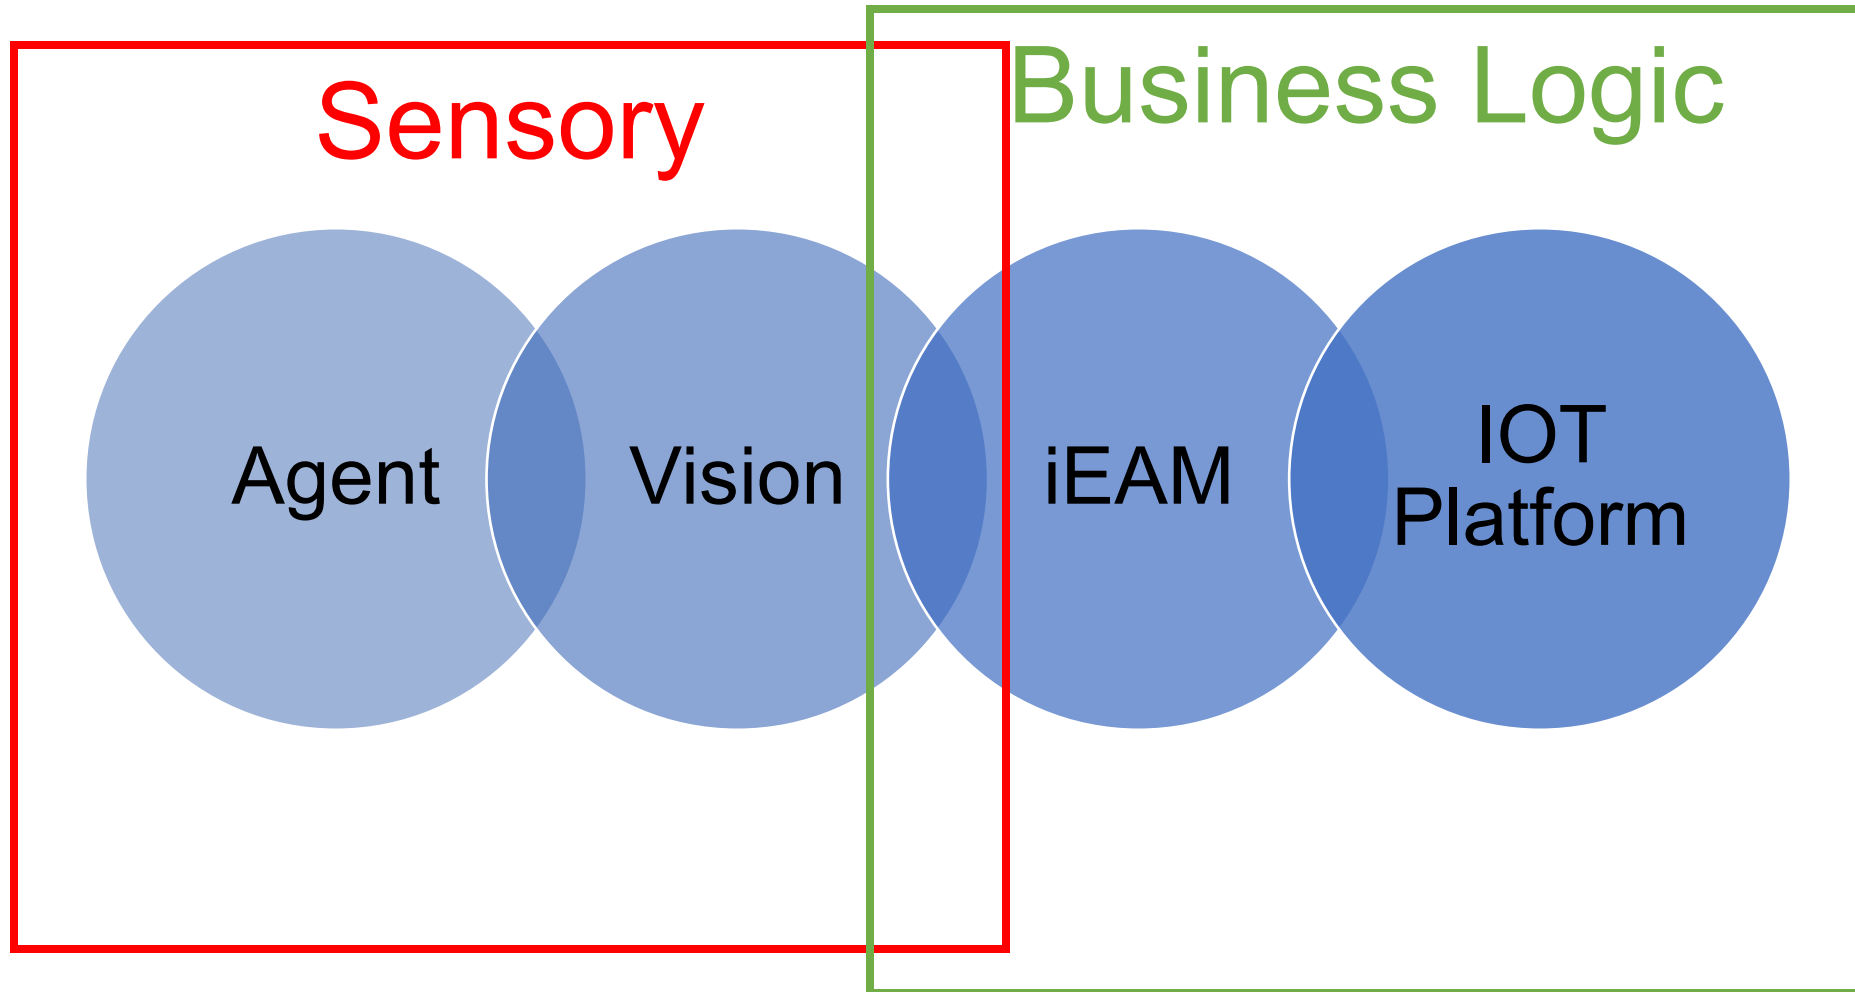

- Robot Embodiment
- E.g. Boston Dynamics, Ameca

Brain

- Business Logic
- AI Sensory (e.g. eyes)
- SLAM

► Our Product Matrix

SEEING FLOW

► iEAM: Integrated EAM Systems

SEEING FLOW

	INFORMATION SYSTEM 		INTELLIGENT SYSTEM	
Asset Management	Real Estate Management System (REMS)	E-Commerce Platform (ECOM)		
Property Management	Property Service System (PMS)	Customer Relationship Management System (CRM)		
Facility Management	Computerized Maintenance Management System (CMMS)	Integrated Workspace Management System (IWMS)	Artificial Intelligence & Internet of Thing (AIOT)	Space Management System (SMS)
Kernel	UNIFIED CODEC (DATA)	BUSINESS FLOW (LOGIC)	STANDARD API (INTERFACE)	COMPLIANCE (SECURITY)

Dashboard

➤ Agent is the Key of Seeingflow System

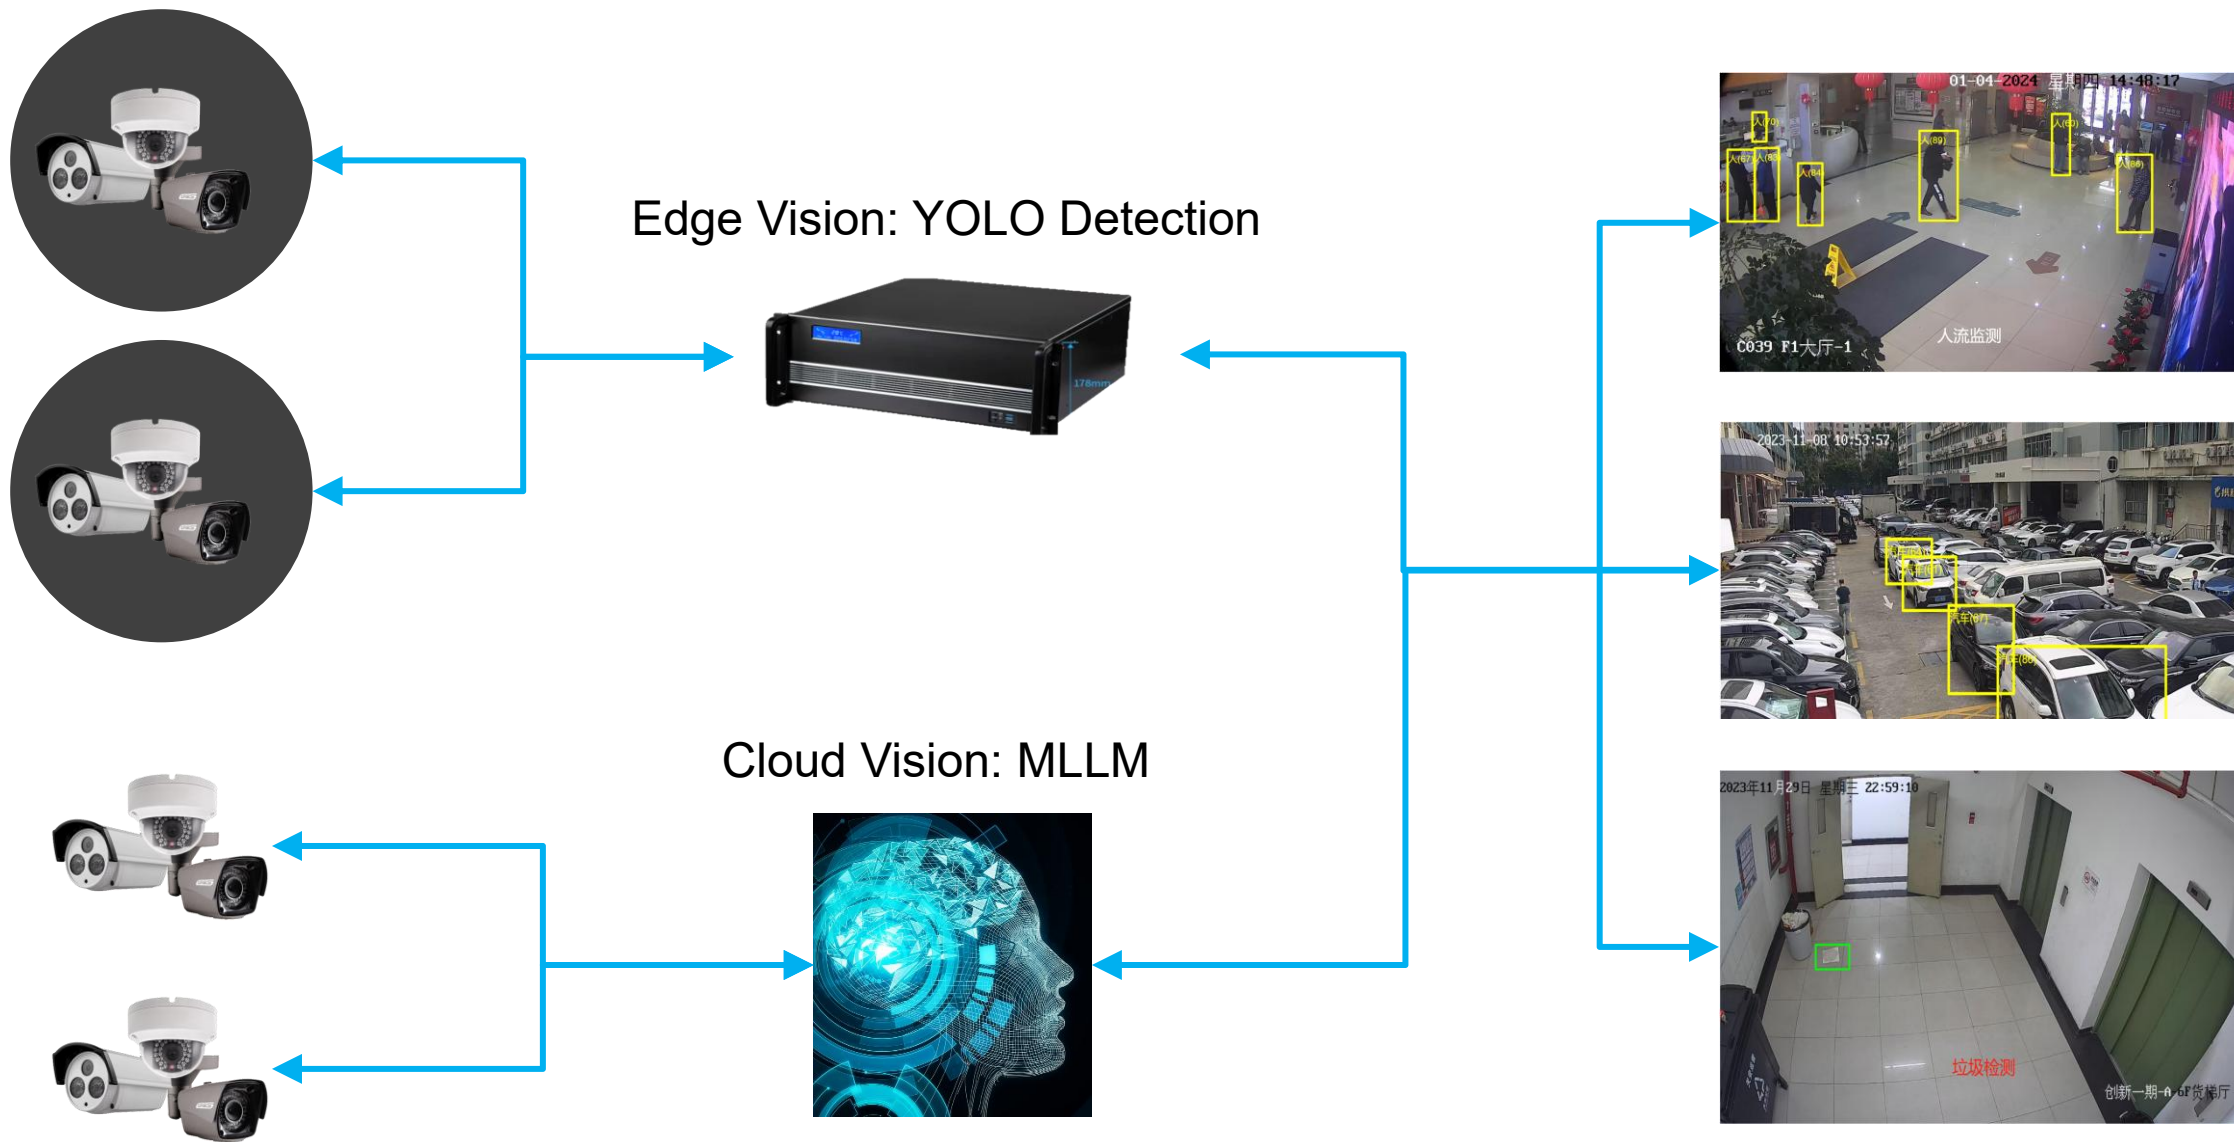

SEEINGFLOW

Agent is able to understand multiple kinds of input, including human language. It detects the purpose of the information and then transform the information into Seeingflow system instruction set. The instruction is not only an order for human workers, but also understood by machines for execution.

03

Scenarios

► Command Centre Dashboard

SEEING FLOW

► The dashboard integrates and visualize all systems, devices and events in real-time.

- 3D Digital Twin
- Environment Monitoring
- Energy Analysis
- Access Control
- Device Status
- Incidents Response
- Alarm Centre

► Smart Security: AI Camera Patrol

SEEING FLOW

AI Patrol through Cameras

- Detecting anomalies, AI sends alarms and work orders to staff
- CV models using YOLO + MLLM

Cloud + (Edge) + Terminal

- Support both cloud and edge computing

AI Patrol vs Human Patrol

- Largely reduced labor cost around 40% to 60%

► Smart Security: Patrol Robots

SEEING FLOW

Robot + AI

Patrol Efficiency

70%

Auto-pilot

- Autonomous route planning
- Obstacle avoidance
- Zero-human intervention

Long Battery Life

- 8-hour continuous patrol, 2-hour charging

AI Alarm

- Hundreds of CV detection scenarios
- Auto-issue alarms

► Smart Security: Patrol Drones

SEEING FLOW

AI Tracking

Tracking & Following

LiDAR Ranging

1500m LiDAR Ranging

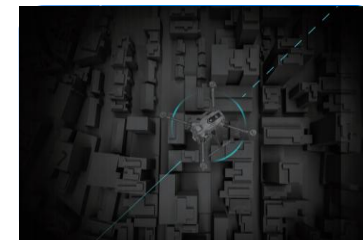

Auto Parking

Auto Parking & Charging

Auto Returning

Entire Unmanned Operation

► Smart Janitorial: Cleaning Robots

SEEING FLOW

In/Outdoor Auto Cleaning Robot

- Fully automated, self-returning & charging
- All-in-one: vacuuming, scrubbing, sweeping, dust mopping
- Strong pass-ability: cleans narrow aisles and hidden areas
- Zero distance from edge: able to clean along the edges
- Auto spot cleaning brings up to 4X efficiency improvement
- Identifies flooring types and automatically adjusts brush height to protect flooring materials
- Superb durability

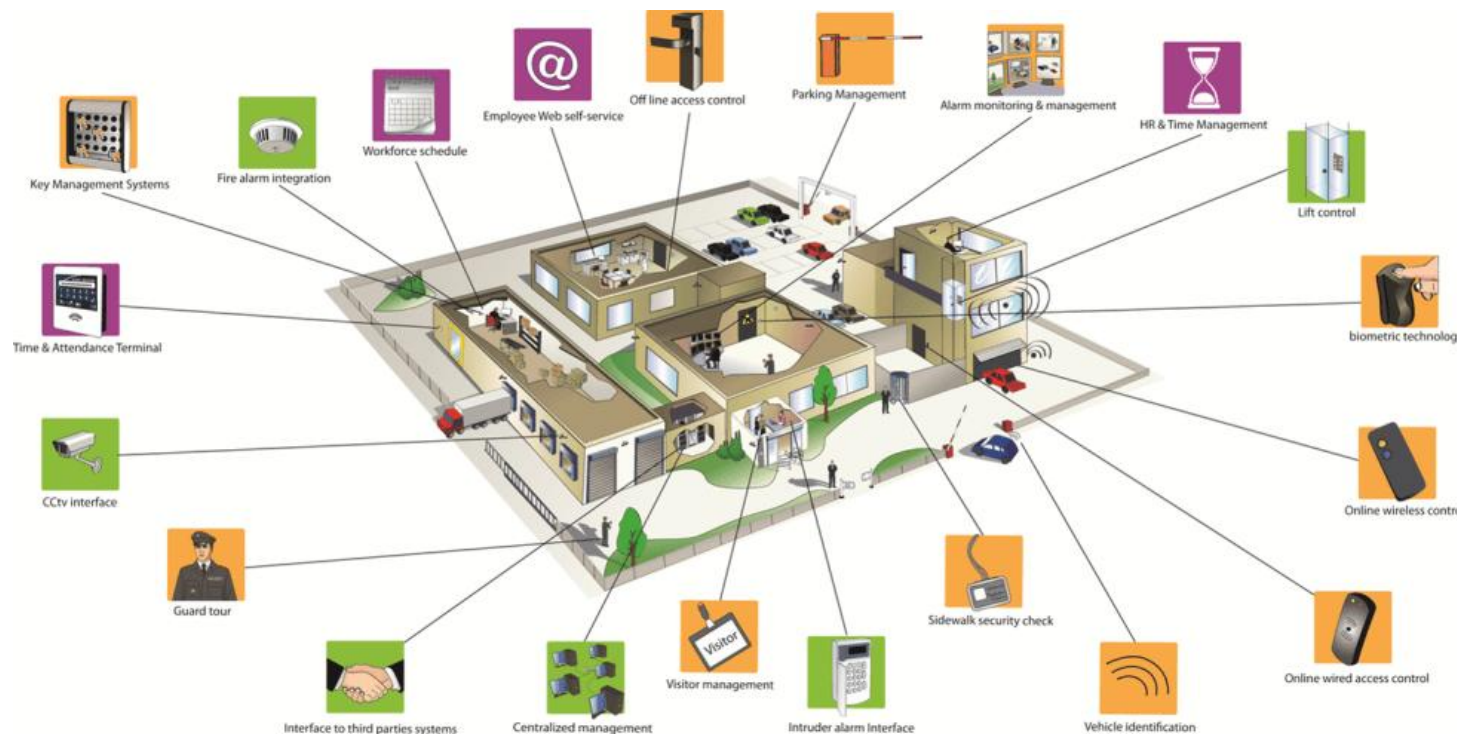

Cleaning Drone

- Fully automated, self-operation
- Daily cleaning 2000m²
- 60%-80% of human cost
- Zero safety risk
- TWO scenarios:
 - Facade glass
 - Solar Panel

► IOT Scenario: PSIM

SEEING FLOW

- **PSIM** (Physical Security Information Management) serves as the **command center**, orchestrating a seamless **integration** of data from various security devices and sensors to present you with a comprehensive real-time security landscape.
- PSIM transforms isolated data into meaningful insights, enabling security personnel to make informed decisions swiftly.
- PSIM boosts the efficiency of security management while enhancing the precision of security strategies through in-depth data analysis.

► IOT Scenario: BMS

SEEING FLOW

- BMS (Building Management System) is the adept "**manager**" of a building's internal environment, focusing on **optimizing** HVAC systems, lighting, electricity, and elevators. Its mission is to elevate operational efficiency and comfort within the building.
- While BMS concerns itself with the optimization of the **building's internal operations**, PSIM is centered on **security**, addressing protection-related **decisions and responses**.

► IOT Scenario: Smart Lighting

SEEING FLOW

- Light-responsive auto-dimming maintains constant illuminance.
- Automatic / manual operation plus remote monitoring and control streamline facility management.
- Delivers measurable energy and resource savings.
- Ideal for lobbies, public corridors, exterior accent lighting, conference rooms, and other communal areas.

► IOT Scenario: Smart Restroom

SEEING FLOW

Environment Monitoring

- Temperature and humidity monitoring
- Dynamic cleaning plan based on traffics
- Consumables monitoring for soap & paper

Safety Monitoring

- Long-time stay alert

► IOT Scenario: Environmental Monitoring

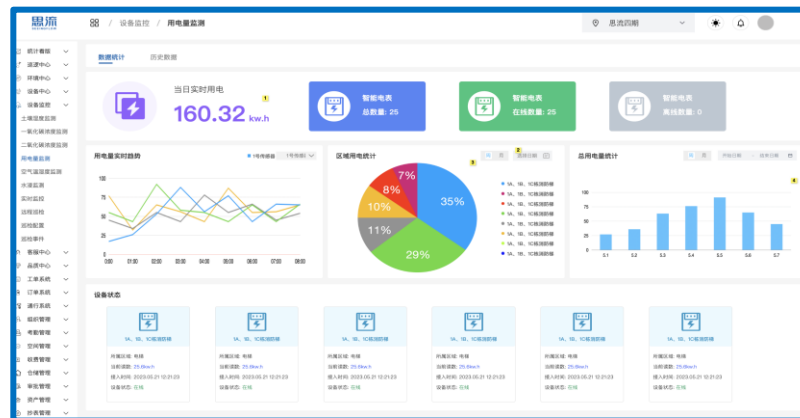

SEEING FLOW

Real-time Sensors Monitoring

- Temperature, humidity, PM2.5, PM10, noise, and concentration of CO₂, CH₂O
- Power and water consumption

Value

- Incidents prevention
- Energy saving

► Back-office: Work Order (Ticket) System

SEEING FLOW

Periodic + Incidental Work

- Periodic work follows PDCA model
- Incidental work follows DRIER model

Grab + Assign + Transfer

- Tickets can be grabbed, assigned, and transferred using mobile Apps

Overdue & Escalation

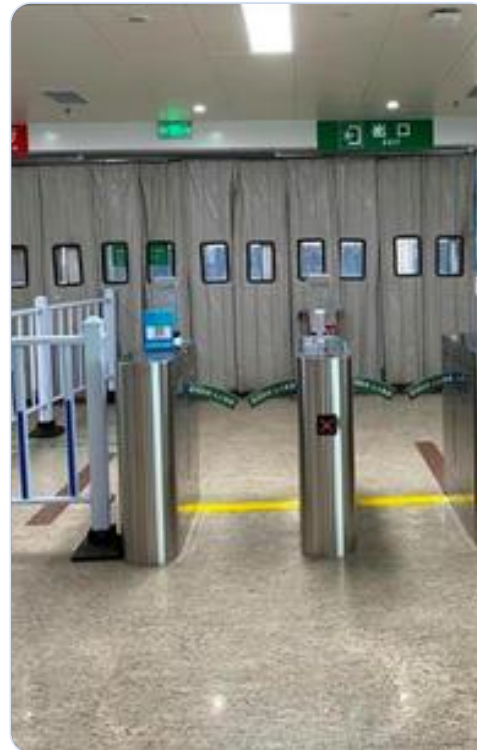

- SLA deadline can be set; overdue tickets are escalated to supervisors

► Back-office: One-ID Pass

SEEING FLOW

One-ID is a collaborative identity-management solution that creates a single, trusted, digital identity for each passenger

Universal Pass

A single credential: card, face, fingerprint or QR code, unlocks every hospital service and security point: outpatient, inpatient billing, parking, office, nursery, pharmacy and more.

Configurable Access Permissions

Permissions can be flexibly assigned by individual, department, security level and time window for fully governed, touch-free movement across the entire campus.

► Back-office: Smart Carpark

SEEING FLOW

Multiple Payment Options

- Mobile payment, card payment, flash payment and cash are all accepted, accommodating every user preference.

Advance Parking Reservation

- Drivers can pre-book spaces via mobile app, maximizing turnover and eliminating peak-hour congestion.

Real-Time Self-Diagnostics

- Devices continuously self-check; faults are reported instantly for rapid on-site or remote resolution.

Remote Supervision & Reporting

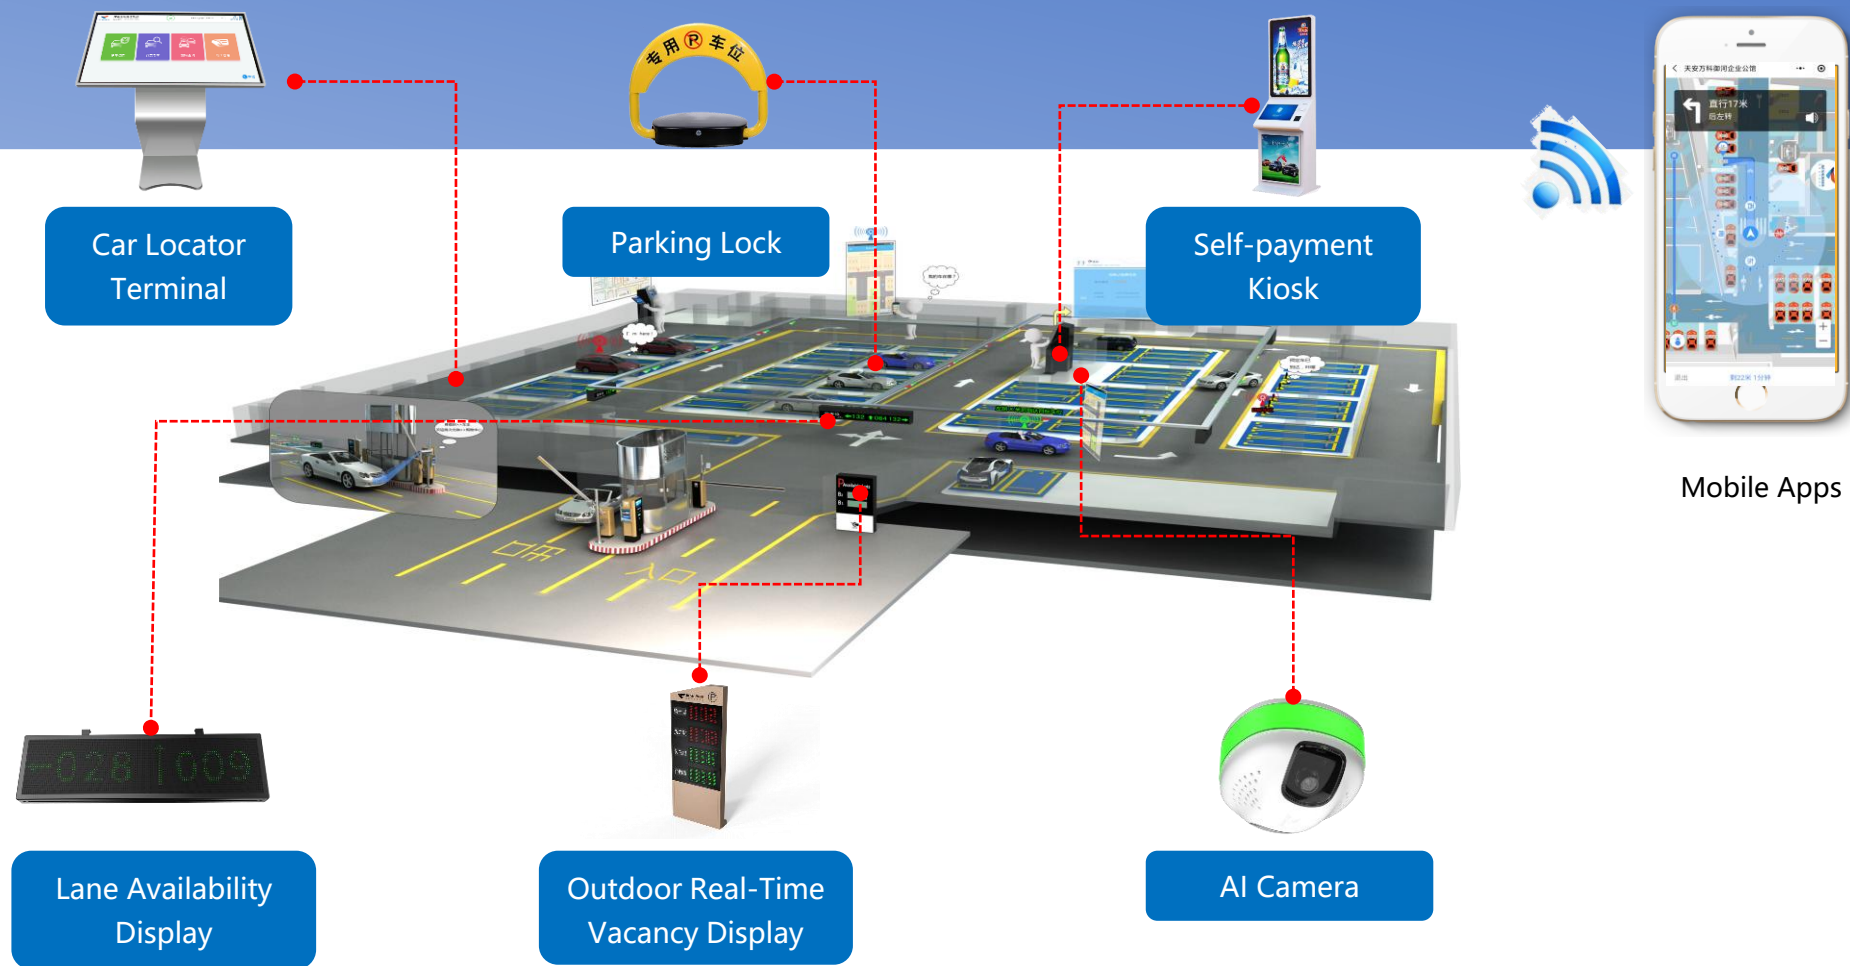

- All operational data are automatically aggregated and uploaded to the cloud, enabling real-time monitoring, WEB-based report queries and remote printing.

Multi-Mode Recognition

- The system supports intelligent license-plate recognition and QR-code entry/exit for vehicles without plates, ensuring seamless access in any scenario.

► Back-office: Car Locator

SEEING FLOW

► Cashier-less Smart Store

01 Face ID

- One-time face-to-account binding in the app
- Entry is granted instantly through facial recognition

02 Item Monitoring

- Automatically alerts to swap out near-expiry items
- Sales and traffic forecasts trigger automatic reorders and instant restock alerts

03 Smart Price Label

- Sync promotions instantly: price changes keep online and offline channels aligned

04 Behavior Tracking

- Cameras and smart shelves capture browse-pick-buy behavior in real time

05 Auto Payment

- Cameras recognize the customer and auto-charge his/her account upon checking-out

Part

04

Deployment

► Common Full Process

SEEING FLOW

- Obtain local license
- Customize and localize system functions

- Deploy the system to local environment
- Knowledge transfer
- Training on usage

Basic Construction

- Network (e.g. fibre, cable, WiFi, LoRa...) construction

Localization & Customization

Hardware Installation

- Install sensors, cameras, servers, robots and etc.

Software Deployment

► Collaborative Deployment

SEEING FLOW

Take responsibility on the entire solution, from planning, hardware procurement, software customization & deployment, and knowledge transfer.

Help on localization such as license, local customer/collaborator/supplier relationship maintenance.

Local Team is Necessary

Seeingflow will set up local team to make the deployment successful. The local deployment team will accompany customer from day-1 to day-30 after the system online. Then local maintenance team will take over.

Part

05

Service

TECH

Technological Service

- Server and system maintenance
- Technical customer support hotline
- On-site service

KNLG

Knowledge Service

- Periodic training on system usage and maintenance
- User manual and documents delivery
- Customer service hotline
- Help on IP application or localization (if required)

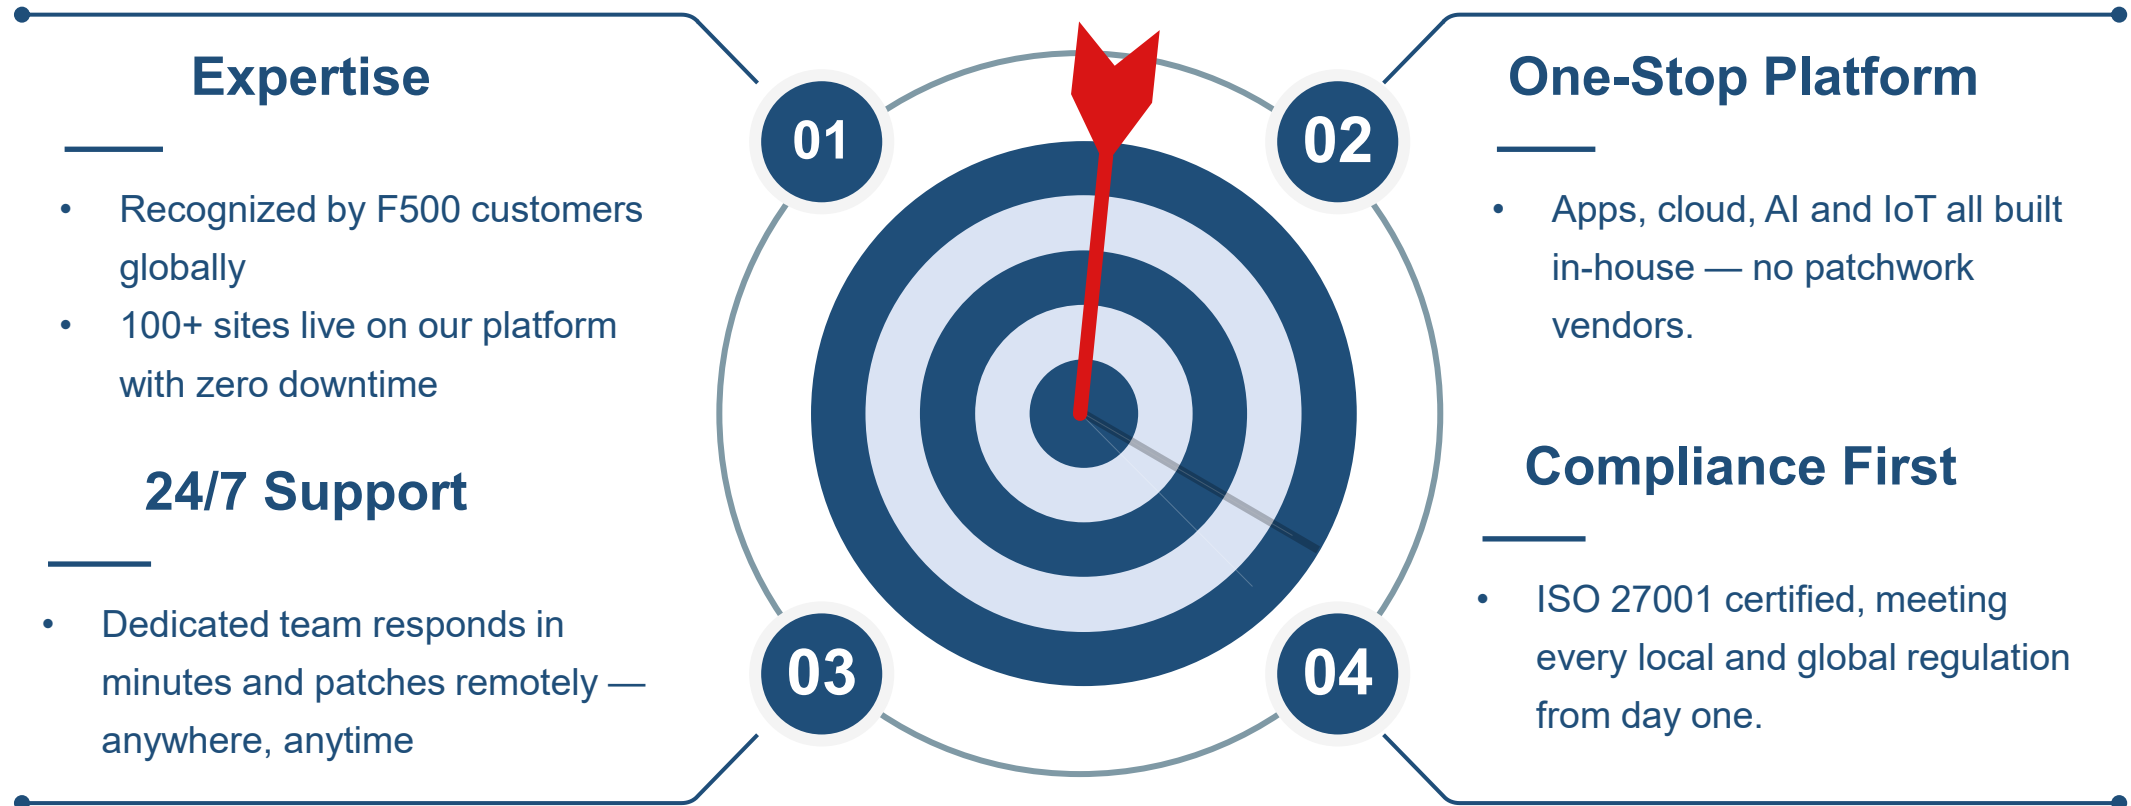

Part

06

Conclusion

► We are your best partner
