

SEEING FLOW

EAM Platform for the AI Era

for Intelligent Property Operations

Unify operations, mobile execution, client service, spatial data, AIoT, and multimodal AI agents in one intelligent operating platform.

Property operations

Work orders, inspections, billing, service, and assets

Multimodal AI

Text, image, video, sensor, and workflow-aware assistance

Spatial data core

Standardized places, equipment, events, and workflows

Product Catalogue

For property management, facility operations, commercial offices, communities, industrial parks, and public buildings.

	INFORMATION SYSTEM		INTELLIGENT SYSTEM	
AM LAYER	Real Estate Management System (REMS)	E-Commerce Platform (ECOM)		
PM LAYER	Property Service System (PMS)	Customer Relationship Management System (CRM)		
FM LAYER	Computerized Maintenance Management System (CMMS)	Integrated Workspace Management System (IWMS)	Artificial Intelligence & Internet of Thing (AIOT)	Space Management System (SMS)
KERNAL	UNIFIED CODEC (DATA)	BUSINESS FLOW (LOGIC)	STANDARD API (INTERFACE)	COMPLIANCE (SECURITY)

AM, PM, and FM form the professional service stack. SeeingFlow iEAM connects these layers through shared data, workflows, APIs, and compliance controls.

The platform layer is the OS of the whole property-operation system.

Application subsystems can be plug-and-play while the platform OS keeps headquarters, on-site work, kernels, and business applications unified.

Operating model: improvement loop and four portals

The platform supports continuous service improvement while separating experiences for supervisors, operators, customers, and executors.

Plan

Define SOPs, schedules, SLAs, resource plans, and standards.

Do

Dispatch tasks, execute on mobile, and collect field evidence.

Check

Inspect completion and compare operating outcomes.

Act

Update standards and improve the next operating cycle.

Four portals align the operating chain: supervision, operations, customer service, and execution.

Designed for the people who run property operations

Role-specific experiences keep the software comprehensive without making every user face the full platform complexity.

Operations

Work orders, inspections, dispatch, reports

Client Service

Requests, repairs, payments, reviews

Asset and Space

Equipment, locations, events, templates

Finance

Billing, payment, collection, statements

AI and Analytics

MLLM agents, productivity, satisfaction

Security

SSO, access control, alerts, encryption

Operational loop: configure standards -> receive requests -> dispatch work -> execute on mobile -> verify completion -> analyze performance -> improve service quality.

The operating foundation behind intelligent property services

Standard data model

A unified code system lets people, devices, assets, places, events, and SOPs speak the same operational language across every property. It enables measurable work, consistent analysis, and easier cross-project deployment.

Category I	Cat1	Category II	Cat2
Public	1	Building	1
Public	1	Swimming Pool	2
Public	1	Recreating Area	3
Public	1	Car Park	4
Public	1	Lobby	5
Public	1	IT	6
Public	1	Garage	7
Public	1	Junction	8
Public	1	Entrance	9
Public	1	Road	10
Public	1	Plaza	11

Space coding

Main Coding	Category I	Cat1	Category II	Cat2
2010103	Monitoring Device	1	E-fence Control Server	1
3270499	Monitoring Device	1	CCTV Camera	2
3270499	Monitoring Device	1	Tripod Head	3
3270499	Monitoring Device	1	Camera	4
3270499	Monitoring Device	1	E-fence Device	5
2010103	Monitoring Device	1	CCTV Server	6
2010103	Monitoring Device	1	CCTV Screen	7
2010103	Monitoring Device	1	NVR	8
1029002	Access Control Device	2	Video Door Bell	9
1029002	Access Control Device	2	Access Control Card Reader	10

PP&E coding

Category	Module	Job	Code
Security	Patrol	Daily Patrol	A.1.1.1
Security	Patrol	Issue Reporting	A.1.2.2
Security	Patrol	Illegal Parking	A.1.3.3
Security	Patrol	Mismanagement	A.1.4.4
Security	Patrol	Illegal Construction	A.1.5.5
Security	Patrol	Illegal Hanging	A.1.6.6
Security	Patrol	Noise Nuisance	A.1.7.7
Security	Patrol	Pet Nuisance	A.1.8.8
Security	Patrol	Graffiti	A.1.9.9
Security	Patrol	Uttering	A.1.10.10

Event coding

Security and compliance kernel

Account administration, visit control, log analysis, real-time alarms, data protection, and compliance qualifications protect operational data across the platform.

Built for multi-format property portfolios

Available as a managed cloud service, private-cloud deployment, or on-premise system for residential communities, commercial offices, industrial parks, public buildings, and city-scale operations.

85%+

satisfaction level reported in a smart city property case

70%

complaint reduction and resident payment rate in case materials

60%

internal productivity improvement cited in the case section

16

property formats supported by configurable operating templates

Best-fit buyers

Property managers, facilities operators, public-building service providers, mixed-use portfolio operators, and organizations moving from fragmented tools to integrated AI-enabled operations.

Recommended next step

Use this catalogue as the external-facing overview, and use the full PPTX as the supporting deep-dive deck for architecture, deployment options, modules, and case details.
