

Auto-Patrolling Robot Series

Autonomous patrol, AI event review, remote dispatch, and Model I light delivery for practical site operations.

Catalogue Use
For channel partners, facility owners, and project teams comparing patrol vehicle options.

Operating Value
Automates repetitive patrol, records exceptions, and gives operators a dispatchable field device.

- Security Patrol
- AI Detection
- Remote Dispatch
- Model I Delivery
- System Workflow

Model I
Outdoor patrol plus delivery. Stronger passage and larger body volume for parcel or takeaway pilots.

Model II
Compact patrol for corridors, car parks, and tight-turning routes where space is limited.

Size	1300 x 970 x 1745 mm	930 x 600 x 1400 mm
Turning	2,000 mm radius	Turns in place
Wading	10 cm	10 cm
Endurance	6-8 h	> 7 h
Obstacle	10 cm	5 cm
Speed	1.5 m/s	2 m/s
Protection	IPX5	IP54
Weight	220 kg	120 kg
Charging	<= 3 h	<= 3 h

Application, System, and Rollout

Autonomous patrol
Planned route patrol with common obstacle avoidance.

Remote dispatch
Monitoring, assignment, escalation, and closure.

Alert handoff
Operator and onsite response trail.

Evidence records
Incident archive, review notes, and patrol reports.

AI detection
People, vehicles, objects, and selected behaviours.

Lidar SLAM
Positioning, route following, and map patrol.

Light delivery
Model I carries parcels and takeaway food.

Route tuning
Improve route rules after pilot operation.

Deployment Readiness

✓ Network coverage

✓ Charging location

✓ Video retention

✓ API needs

✓ User roles

✓ Site SOP

Typical Sites

Industrial parks
Perimeter, loading areas, internal patrol routes

Residential estates
Shared pedestrian and vehicle routes

Large venues
Plazas, event support, service roads

Car parks
Compact routes with tight turning

Campuses
Teaching blocks, access roads, late checks

Logistics yards
Gate areas, staging lanes, after-hours patrol

System Flow

Operating Outputs

Live Patrol Status
Route progress, position, and operating condition.

Verified Alerts
Events prepared for operator review and escalation.

Dispatch Tasks
Work orders with owner, action, and closure status.

Incident Records
Archive, reports, evidence trail, and SLA review.

1. Site Setup
Select priority routes, charging point, test schedule, and operator owner.

2. Validation
Review detection accuracy, response time, and route stability.

3. Rollout
Expand route coverage, standard reports, maintenance, and dispatch rules.

Delivery Setup
Confirm parcel size, loading method, route limits, and customer handoff.
